SWISSSORT

WHEEL

E-SORTER

READING AND SORTING OF ECOMMERCE ITEMS

- ✓ Dumper & Centering conveyor
- ✓ OCR-/barcode reading from 6 sides
- ✓ Calibratable Dimensioner and scale
- ✓ High performance labeler and verifier
- ✓ Flexible exits: „wheel sort" and/ or „crossbelt"
- ✓ Up to 7.200 items per hour
- ✓ From postcards up to 80x120x60cm and up to 50kg

INNOVATIVE SOLUTIONS

DON'T HAVE TO BE BIG, COMPLEX AND EXPENSIVE.

With its high performance features, the E-SORTER offers an ideal solution for data capturing and sorting for eCommerce items.

SwissSort offers 6-page all-round reading (OCR and barcode recognition) and volume measurement as standard. This improves throughput and reduces singulation efforts and the "no-read" rate.

A calibratable scale and a high-performance labeller ("top-down" or "bottom-up") round off the configuration options. To select the best sorting technology, the "Wheel Sort" and "Crossbelt" techniques are used, individually or in combination.

SwissSort also develops its software completely in-house with its highly specialized IT team. This enables individual solutions, for example for interfaces.

A maintenance concept with a full guarantee during the entire contract period (up to >10 years) rounds off the offer.

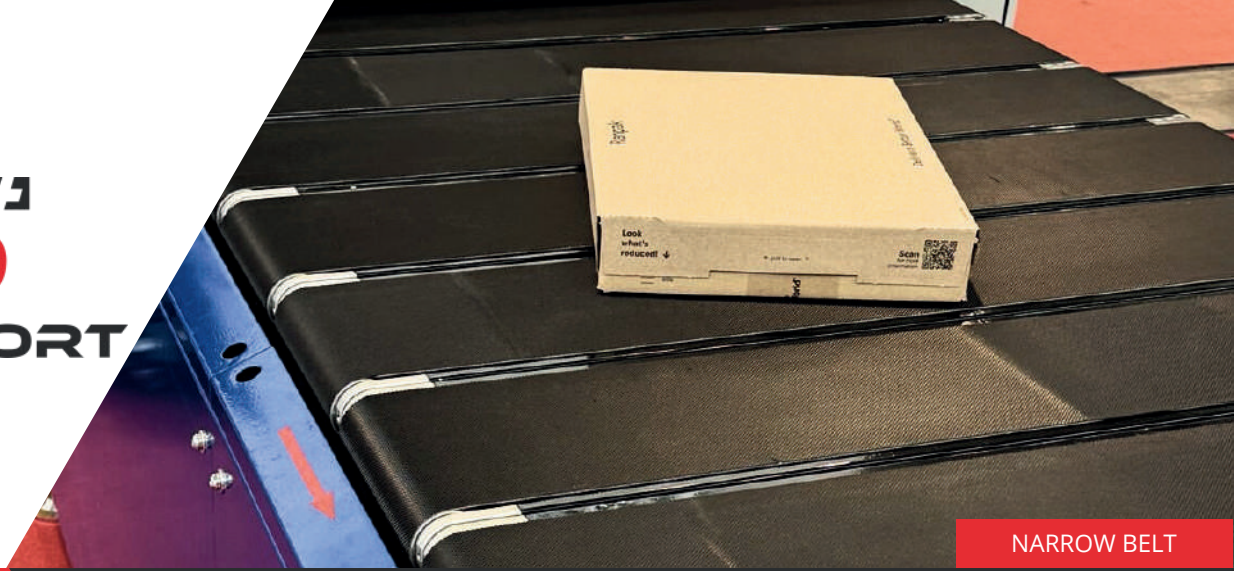

OCR AND BARCODE RECOGNITION

BOTTOM-UP LABELLER

E-SORTER

ERFASSUNG & SORTIERUNG VON ECOMMERCE-SENDUNGEN

- ✓ Dumper & Centering conveyor
- ✓ OCR-/barcode reading from 6 sides
- ✓ Calibratable Dimensioner and scale
- ✓ High performance labeler and verifier
- ✓ Exits via «narrow belt»
- ✓ Up to 10.000 items per hour
- ✓ Consignments from 100x100x5mm to 2000x1000x700mm & up to 70kg

INNOVATIVE SOLUTIONS

PRECISE SORTING & MAXIMUM EFFICIENCY.

With its high performance features, the E-SORTER with narrow belt control offers an ideal recording and sorting solution for eCommerce consignments.

SwissSort offers 6-sided all-round reading (OCR and barcode recognition) and double volume measurement as standard. This improves throughput and reduces the separation effort and the "no-read" rate. A calibratable scale, a high-performance labeler ("top-down" or "bottom-up") and a dumper, centring and singulation module in the front end round off the configuration options.

The "Narrow Belt" technology is used for the selection of the sorting technology. This consists of numerous belts arranged on the fixed rail of the main frame to achieve high speed and perpendicular to the main movement to fulfill the function of transporting and sorting goods. The narrow belt diverter can sort all kinds of e-commerce and merchandise shipments, small packages and parcels in a safe and targeted manner. It is the standard sorting equipment for eCommerce shipments, small parcels, parcels and foil-wrapped shipments.

SwissSort also develops its software entirely in-house with its highly specialized IT team. This enables individual solutions, for example for interfaces. A maintenance concept with a full guarantee for the entire term of the contract (up to >10 years) rounds off the offer.
